

# Huussi

## Death to the flushing toilet

**Water is needed to grow food and keep ecosystems thriving, not to flush down toilets. We also need to realise that our waste is not waste but a valuable resource.**

The current sanitation infrastructure needs to be critically reassessed in the context of global freshwater shortages and broken nutrient flows, which cause serious ecosystem damage globally. By questioning the so far indisputable position of the water-based sanitation system, this book aims to inspire architects and professionals to start looking for alternative solutions to better serve the world we inhabit today.

The topics of sustainable sanitation are explored here through expert articles that provide in-depth knowledge, such as on the history of sanitation, nutrient flows and circular waste economies. This book accompanies The Dry Collective's exhibition 'Huussi – Imagining the Future History of Sanitation', curated by Arja Renell and presented by Archinfo in the Pavilion of Finland at the 18th International Architecture Exhibition of La Biennale di Venezia.

### Facts

**Language** English  
**Editors** Arja Renell, The Dry Collective  
**Graphic Design** Antero Jokinen, Jens Andersson  
**No. of Pages** 112  
**Format** 160 × 210 mm  
**Binding** Open binding  
**Publication Date** May 2023  
**ISBN** 978-91-89270-59-6
